Aside from that, the DM system should also provide tools to organize these files and find those that meet certain user-defined criteria, with a minimal amount of effort or system resources.. In short, a DM system is designed to store, secure, and ultimately help you make sense of the documents your business uses.. Storage and Collaboration Even at its most basic, a DM system should be able to store documents in a wide variety of file types, though you should check your organization's requirements carefully in this regard and match those up against any potential system prior to purchasing.. Most often, this will come in the form of a 'smart search' feature; this is another key feature you should test during your evaluation phase.

Some solutions, such as Microsoft SharePoint Online, provide features that will automatically classify or tag documents based on rules you configure.. In addition to new efficiency, DM systems can also act as tools, ones that combine new ways of communicating with equal attention paid to legitimate regulatory needs.. However, you shouldn't look at this as a key buying criteria because storage is the easy part.
